

Supplementary Figure S10. Protein associations and cell-line test prioritization

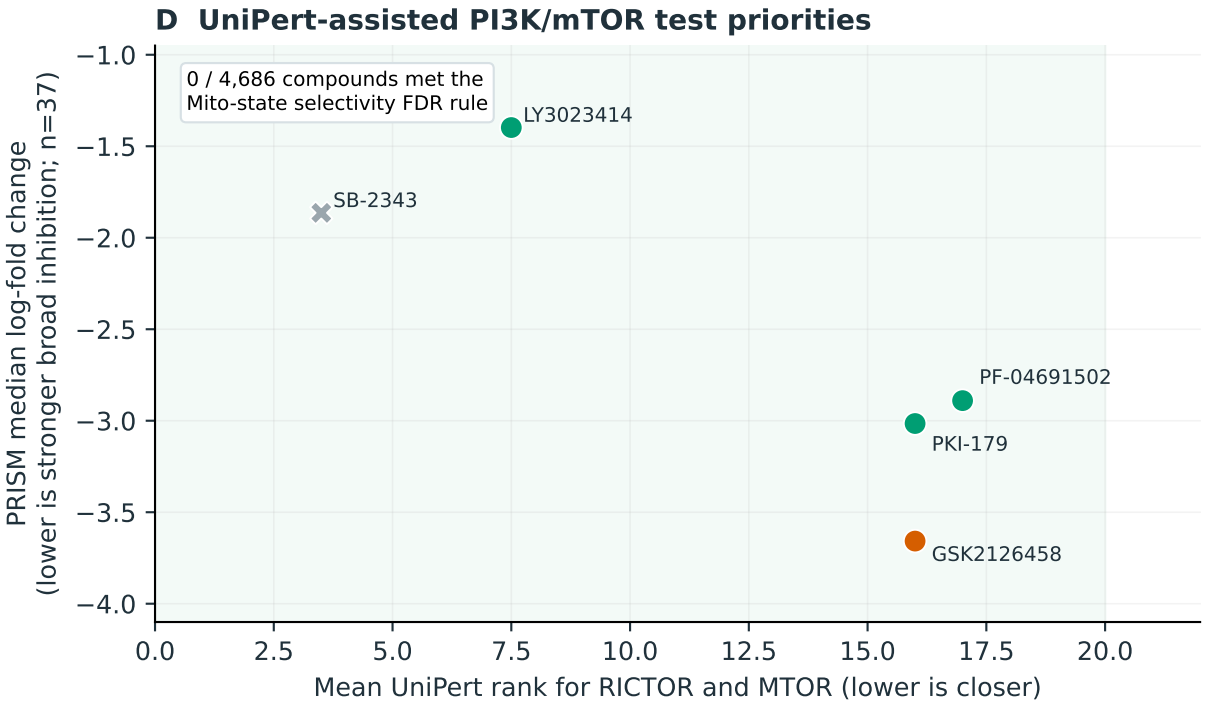

Association across matched untreated tumors; it does not measure kinase activity or therapeutic response.

Akt_pS473 is a multiplexed AKT1/2/3 antibody signal. Gray: the upstream edge is not retained after protein/composition adjustment.

DepMap reflects tumor-cell CRISPR dependency probability, not protein activation, myeloid biology, or ICI response.

Target-space ranking plus broad PDAC PRISM inhibition; not drug binding, state-selective sensitivity, ICI synergy, or patient benefit. `SB-2343` has unresolved exact identity.
