

Supplementary Figure S9. Immune-context annotations and paired-ROI associations

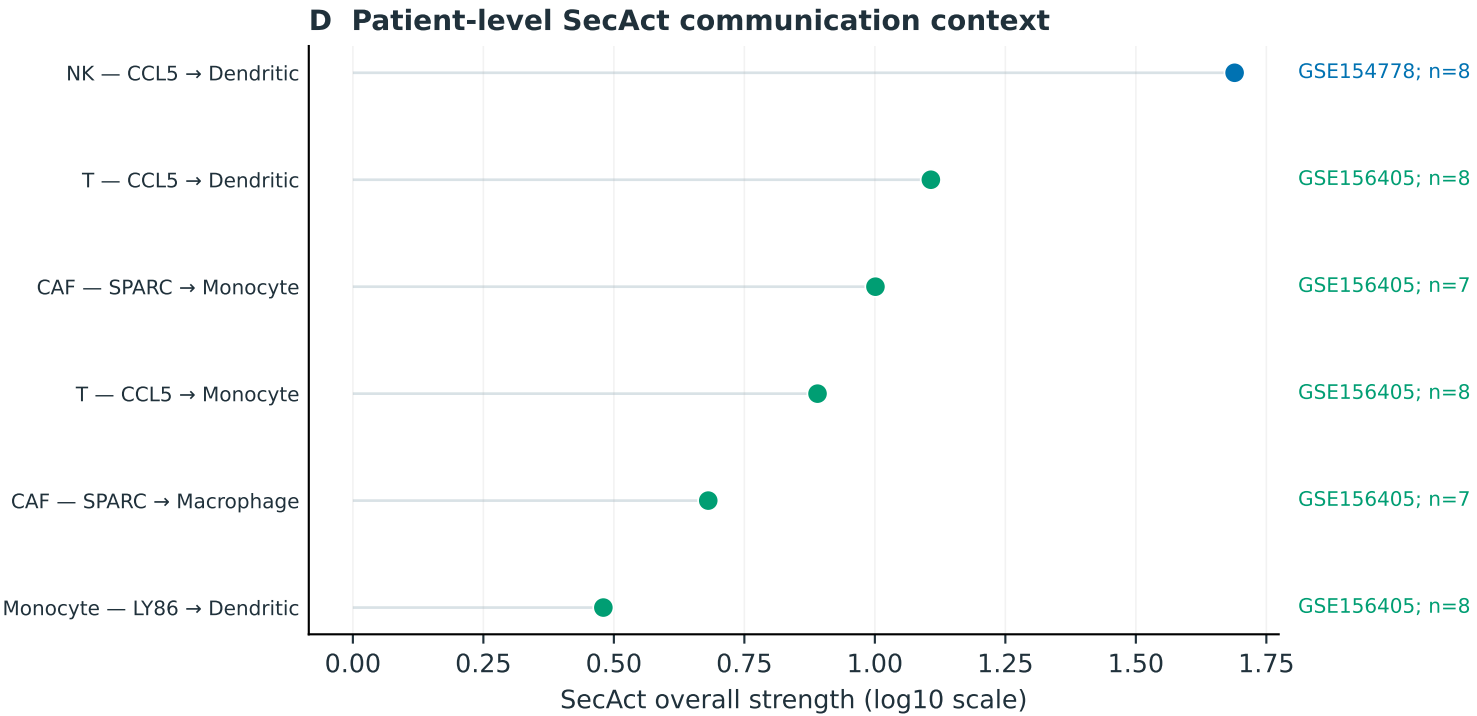

Scores are state annotations in doublet-filtered cells; they do not measure tumor-cell Mito3.

Forty paired tumor/stroma ROI profiles; diamonds show medians. This GeoMx dataset has no geometric coordinates.

The inverse association is not evidence of direct cell contact or ligand-receptor signaling.

Pre-specified pairs with a monocyte, macrophage, or dendritic endpoint; signals are cohort-specific support, not causal validation.
